

GOODBOY OUTDOOR WATER FOUNTAIN

About

The GoodBoy Outdoor Water Fountain gives your dog easy, outdoor access to fresh and clean drinking water. During hot summer days, your four-legged friend needs a clean source of water as well as fun outdoor activities. Our GoodBoy Fountain provides both of those things by being both an entertaining toy and a delicious water fountain.

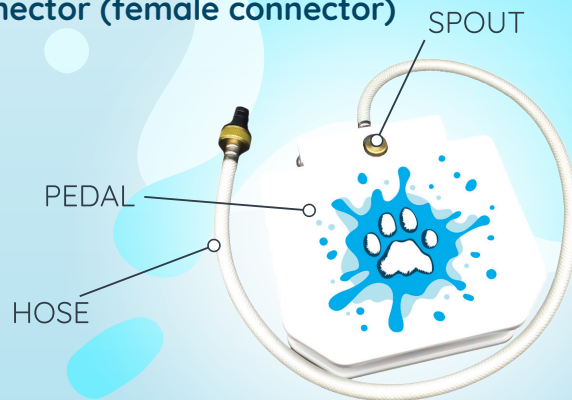

The fountain is easily installed and simple to use. With minimal training, your dog - whether it's a pup or an adult - will quickly learn to use and enjoy this water fountain.

Package contains:

- 1x Water Fountain
- 1x 103 cm (40.5 in) Hose
- 1x Plastic Y-shaped Valve
- 1x Manual

Bonus items:

- 1x Black adapter connector (female connector)
- 1x Quick connector
- 1x Plumber's tape

Instructions

We have added several connector types for easy connectivity to your existing water supply. **Make sure to use thread tape when connecting threaded ends.**

1. Connect the male end of the GoodBoy hose to the copper valve at the back of the pedal.
2. Connect the female end of the included hose to the plastic Y-valve (if your water supply outlet lacks the option to regulate water pressure.) If your water supply already includes a regulatable valve and you don't need to use water from that source for another purpose while using the GoodBoy Fountain, you can connect the female end directly to the threaded end at your water supply.
3. If your water supply is just a bare hose, use the quick connector set to securely attach the female end to the water hose and the male end to the female end of the included hose. If your water supply lacks a valve for regulating water pressure, as mentioned above, connect the plastic Y-valve included in the package. Make sure that both ends of the Y-valve are closed at first.
4. Turn on your water supply and regulate the water pressure (from your end or using the Y-valve included in our kit) so it reaches the height of your dog's head. Include the Y-valve if your system lacks pressure regulation.
5. Test the fountain before allowing your pets to use it by pressing the pedal with your hand or foot couple of times to make sure it works as intended.

Training

1. Patience is the key when training your pet.

2. Place the fully connected, tested and regulated fountain in front of your pet.

3. Push the pedal down and let your dog start drinking from it. When your dog starts to drink, take its front paw(s) and put them on the pedal for a few seconds and then remove by also releasing the pedal and stopping the water. If the water shoots too high and your dog becomes afraid, then you can regulate the pressure from the Y-valve.

4. Now try this several more times by putting your dog's paw(s) on the pedal, allowing them to drink for a second or two and removing them again. Repeat this several times until your dog learns to associate the pedal with water.

5. In the beginning it is best to let your dog only access the fountain from the front, so please place the fountain somewhere they are forced to do so (or place items around the fountain so only the front is accessible). Keep it like that until your dog learns to approach the fountain from that direction in relation to the fountain.

6. To speed up the training process, play with your dog so they get thirsty and are more eager to drink.

7. A good time to train is in the morning when your pet has just woken up and hasn't had a lot of water from their bowl yet.

8. If, after following through with our training manual above, your dog still won't use the fountain, don't worry! Based on our testing, some agile dogs pick up the training within minutes while few will not be interested in the fountain even after thorough training.

Having this in mind, we have decided to cover the product by our 1 year warranty. You will have to contact us directly (support@goodboytraining.com), because Amazon only allows 30 day return window. We expect you not to leave a negative product review in this particular case.

Caution

1. Keep the fountain away from any electrical equipment. Ensure, that the water runoff does not reach any source of electricity.

2. Do not use during the winter. Store the fountain indoors to avoid exposure to freezing temperatures.

3. Do not expose your water supply hose or fountain to direct sunlight for extended periods of time. Sun exposure may heat the water in your hose to extreme temperatures when not in use which may end up harming you, your pet or anyone else who may use the device. We suggest keeping the Fountain and water supply in the shade when using to provide drinking water and only bringing it to the sun when using the Fountain as a toy for your dog.

4. All the pieces are covered with an anti-rusting compound. For best results, avoid scratching the metal in the provided Fountain kit. Rust can form near the connectors from constant and long usage. This does not affect the functionality of the fountain.

5. Use thread tape when connecting threaded ends to make sure there is no leakage of water from unwanted places.

6. Always use low water pressure when testing and setting up your water fountain. Increase the pressure only when necessary. Forcing maximum pressure into the device may result in leaks, or in the worst case, broken equipment. You can change the pressure by using the Y-valve.

7. Make sure the spring under the pedal is upright as it might move when your dog is actively playing with the fountain.

8. DO NOT use the screw on the copper valve under the pedal to adjust the water pressure.

All parts have been tested and function well when properly assembled. If you have any problems setting up or using the GoodBoy Outdoor Dog Water Fountain, please contact us through Amazon or write to us at support@goodboytraining.com.
